

ProjectDocumentation

Technology choices

Project is full-stack, backend has been implemented using node.js and express. The frontend has been implemented using react and materialize UI.

Installation guidelines

All commands are given in the ".../Course Project-master" folder.

Before running the app make sure to connect to "mongodb://127.0.0.1:27017/project" using for example MongoDBCompass

User manual

NOTE If the page is refreshed the login no longer applies.

There is a header present on every page that has links to the home page, post page, login page and the register page.

The home page has all the posts that are found in the database. If the database is empty the home page should look like this.

InstaCode

If there are posts in the database, it should look like this. There are also comment fields for each post. If the user is not logged in these will show in red and not work.

[HOME](#) [POST](#) [LOGIN](#) [REGISTER](#)

InstaCode

Post

```
return ( <div> <Typography id="login-typo" variant="h2">Login</Typography> <div id="loginDiv"> <form onSubmi=[submit] onChange=[handleLogin]> <TextField required id="username" label="Username" type="string"></TextField> <TextField required id="password" label="Password" type="string"></TextField> <Button id="submit" type="submit">Login</Button> </form> </div> </div> )
```

Error

Login to comment

SHOW COMMENTS

Comments can be seen by pressing the show comments tab. The page has to be refreshed for these to show.

Error

Login to comment

Comments

Hyvän näköistä koodia

Kannattaa katsoa tarkemmin muutujien nimeämistä

name" label="Username" type="string"></TextField> <TextField required id="password" type="string"></TextField> </div> </div>)

Create post page has a text input with multiple lines and if you are logged in there is also a submit button.

[HOME](#) [POST](#) [LOGIN](#) [REGISTER](#)

Create post

Post

SUBMIT

Login page has two inputs that you can use to input the username and password and a login button. You should register before login in. **NOTE** the user is not notified if the login is a success or not. The login can be confirmed via the conditional functions.
